

IBM i Security Concepts and Implementation Information

Length:	2.0 Days
Ref:	OL50G
Delivery method:	Classroom Instructor Led Online
Price:	EUR

Overview

Learn how to plan for, implement, and manage security on the IBM i. Also, get an introduction to the features and functions of Management Central.

Public

This is an intermediate course intended for IBM i system administrators, data processing managers and other individuals who implement and manage security on the IBM i. This course is not recommended for system operators.

Prerequisites

You should complete *System Operator Workshop for IBM i (AS24G)* and have responsibility for implementing the security features available for your Power Systems with IBM i.

Objective

- Describe and implement the components of IBM i security, such as user profile, group profile, authorization list, adopted authority and object / resource security
- Develop a security plan for your IBM i
- Describe the options to implement security auditing
- Develop a plan to audit security on your IBM i

Topics

- Class administration and introductions
- IBM i overview and concepts
- Management central overview
- Security concepts and overview
- System values
- User security
- Resource security

- Security auditing
