

Business Activity Monitoring with IBM Business Monitor V7.5 Information

Length:	1.0 Day
Ref:	WB799G
Delivery method:	Classroom Instructor Led Online
Price:	EUR

Overview

In this course, you learn how to design and monitor business measures using IBM Business Monitor while also learning business process management (BPM) techniques and skills.

IBM Business Monitor is a business activity monitoring (BAM) product that supports BPM by measuring business performance, monitoring both in-flight and completed processes, and reporting on business transactions. Business organizations can use the information provided by IBM Business Monitor to identify business problems, correct exceptions, and improve processes and efficiency.

This course includes topics of interest to you who want to design business measures using IBM Business Monitor. Students interested in learning how to administer IBM Business Monitor should take *Administering IBM Business Monitor V7.5 (WB798G)*.

In this course, you learn how IBM Business Monitor is used to collect real-time enterprise event data. The course begins with an overview of IBM Business Monitor and how it supports BAM and BPM. You learn about various types of models, performance indicators, triggers, and alerts that are used to establish performance metrics, monitor events, and manage action services. You also learn how to launch the IBM Business Monitor business space dashboard, and how to create widgets to monitor business event information.

The hands-on exercises in this course enable you to navigate the IBM Business Monitor environment. You also learn how to build customized business space dashboards to monitor and analyze business and performance events.
