Maximo 7.6 Security Model Information

Length: 3.0 Hours

Ref: W0107G □

Delivery method: Web-Based Training

Price: INR

Overview

This course discusses the various security aspects of an Asset Management System to include identifying the number of security groups, security group creation, integration with LDAP repositories and using conditional expression. The course is delivered via interactive simulations where you have an opportunity to learn and potentially interact with the system while we lead you through the functionality. At the end you can test your knowledge by completing the short quizzes. These simulations may aid you in preparing for certification on the product.

Public

IT Service, Sales, Support

Prerequisites

None
